

Issues for the ESRF Long Term Strategy

The "ESRF Long Term Strategy" questions, as proposed by the management:

- 1) Which scientific and technical developments have the highest scientific priority for your community?
- 2) Are there requirements from your community that are not included or properly considered in the LTS paper?
- 3) Are there possible areas of collaboration necessary to fully develop the potential of the new beamlines, involving (for example) direct in-kind contributions from experts in areas other than specific expertises present at the ESRF?
If yes, can you help to develop a discussion on this issue?
- 4) Are there science-driven or technology- driven proposals from your community that could develop into a Partnership including the ESRF?
- 5) Where does your community see the highest priority needs for further development of the infrastructure support at the ESRF?
- 6) Where does your community see ESRF's role in the context of the upcoming European SR Sources? Do you think that your community will change its use of the ESRF once the new SR sources become operational?
