

Umbrella AddressUpdater

Björn Abt

ESRF Umbrella Meeting, Nov 14,15 Grenoble

Attribute updater:

- The idea behind the attribute updater is a central service allowing the user to change his address information just once which then is disseminated to all WUOs where the user is registered at.
- The services uses a challenge-response mechanism to release user information only to facilities where the user is registered at.
- The WUO will only receive a request to update user information but is still free to decide what to do with it.

ESRF Umbrella Meeting, Nov 14,15 Grenoble

B., Abt, PSI 2

Status:

- Technical implementation is ready
- System rollout is not ready
- Makes most sense together with the Affiliation Database
